Encontre 
$$\lim_{t\to -2} \frac{\sqrt{3t^2-8}+t}{2t+4}$$
.

Resolução:

$$\begin{split} &\frac{\sqrt{3t^2-8}+t}{2t+4} = \frac{\sqrt{3t^2-8}+t}{2t+4} \cdot \frac{\sqrt{3t^2-8}-t}{\sqrt{3t^2-8}-t} = \\ &= \frac{2t^2-8}{(2t+4)(\sqrt{3t^2-8}-t)} = \frac{(2t-4)(t+2)}{2(t+2)(\sqrt{3t^2-8}-t)} = \\ &= \frac{2t-4}{2(\sqrt{3t^2-8}-t)} \end{split}$$

$$&\text{Logo } \lim_{t\to -2} \frac{\sqrt{3t^2-8}+t}{2t+4} = \lim_{t\to -2} \frac{t-2}{\sqrt{3t^2-8}-t} = \boxed{-1}$$
