Calcular a integral definida $I = \int_{\pi/6}^{\pi/2} \left(x + \frac{2}{\sin^2 x} \right) dx.$

$$I = \frac{x^2}{2} \Big|_{\pi/6}^{\pi/2} - 2 \cot x \Big|_{\pi/6}^{\pi/2} = \boxed{\frac{\pi^2}{9} + 2\sqrt{3}}$$
