Comprimento da espiral de Arquimedes.

$$C = \int_0^{2\pi} \sqrt{(\cos \theta - \theta \sin \theta)^2 + (\sin \theta + \theta \cos \theta)^2} \ d\theta = \int_0^{2\pi} \sqrt{1 + \theta^2} \ d\theta$$

Seja $\theta = \tan \varphi$, $d\theta = \sec^2 \varphi \ d\varphi$.

$$C = \int_0^{\arctan 2\pi} \sec^3 \varphi \ d\varphi = \boxed{\frac{2\pi\sqrt{4\pi^2 + 1} + \log\left(2\pi + \sqrt{4\pi^2 + 1}\right)}{2}}$$
