Calcular
$$I = \int_0^{\frac{\pi}{6}} \tan^2 2x \ dx$$
.

Resolução:

$$I = \int_0^{\frac{\pi}{6}} \left[(\sec^2 2x) - 1 \right] \, dx = \left(\frac{\tan 2x}{2} - x \right) \Big|_0^{\frac{\pi}{6}} = \boxed{\frac{\sqrt{3}}{2} - \frac{\pi}{6}}$$
