Encontre
$$\lim_{t\to -2} \frac{\sqrt{3t^2-8}+t}{2t+4}$$
.

Resolução:

$$\begin{split} &\frac{\sqrt{3t^2 - 8} + t}{2t + 4} = \frac{\sqrt{3t^2 - 8} + t}{2t + 4} \cdot \frac{\sqrt{3t^2 - 8} - t}{\sqrt{3t^2 - 8} - t} = \\ &= \frac{2t^2 - 8}{(2t + 4)(\sqrt{3t^2 - 8} - t)} = \frac{(2t - 4)(t + 2)}{2(t + 2)(\sqrt{3t^2 - 8} - t)} = \\ &= \frac{2t - 4}{2(\sqrt{3t^2 - 8} - t)} \\ &\text{Logo } \lim_{t \to -2} \frac{\sqrt{3t^2 - 8} + t}{2t + 4} = \lim_{t \to -2} \frac{t - 2}{\sqrt{3t^2 - 8} - t} = \boxed{-1} \end{split}$$
